About Me

Third-year Computer Science student at De La Salle University – Dasmariñas with experience in developing web applications using React, TypeScript, Python, and FastAPI. Familiar with building responsive user interfaces, integrating frontend with backend APIs, and working with database-driven systems. Interested in software development, system integration, and gaining hands-on experience in a professional IT environment.

Education

De La Salle University – Dasmariñas Bachelor of Science in Computer Science	2023 - Present
Cavite School of Life – Bacoor Campus Senior High School Diploma	2011 - 2023

Technical Skills

- Languages:** Python, JavaScript, HTML, CSS
- Frameworks:** React, PyQt5, Node.js
- Tools:** Git, GitHub, VS Code, Figma
- Databases:** SQLite
- Other Skills:** Responsive Web Design, Component-Based UI Development, Debugging, Version Control

Work Experience

South Tools and Trading Services Bacoor, Cavite <i>Intern</i>	May 2023
- Assisted in operational tasks in an industrial environment, following strict safety and quality procedures. - Developed discipline, attention to detail, and time management through hands-on technical work and task execution. - Gained experience working in a structured workplace environment, collaborating with staff and completing assigned responsibilities efficiently.	

Project Experience

SimPathy - Personality-Based Virtual Patient System for Emotion-Aware Nursing Education

March 2026 – Present

- Developed a **responsive frontend interface** using React, TypeScript, Vite, and Tailwind CSS for a virtual patient simulation system prototype.
- Integrated and worked with a **FastAPI-based backend system**, handling API communication, authentication flow, and database-connected features during development.
- Collaborated with a research and development team to support system modules including **facial emotion recognition, personality-based patient modeling, and feedback generation** for nursing education simulations.

MyRhythm - Multi-input Music Recommendation system using FER, Heart Rate, and User Preferences

September – December 2025

- Designed and implemented a **desktop application interface** using PyQt5 with a focus on usability and responsive layout.
- Developed core Python logic for a **music recommendation system** integrating user preferences, facial emotion recognition, and heart rate input signals.
- Collaborated with a development team to build an **adaptive recommendation system** that adjusts music output based on real-time emotional and physiological data.

Careflow - Doctor's Appointment App

January – May 2025

- Designed and developed a **responsive web application interface** using HTML, CSS, and JavaScript for an online appointment booking system
- Implemented core frontend functionalities including **doctor search, appointment scheduling, filtering, and booking workflows** to improve user navigation and usability.
- Collaborated with team members to integrate frontend components with backend logic, ensuring a **functional and user-friendly appointment management system** for patients and doctors.
